## Introduction

Under the General Data Protection Regulations (GDPR), individuals have a right to be informed about how the school uses any personal data that we hold about them. This report provides information on the kinds of personal data we hold as a school and why and how we might use it.

Schools use a variety of personal data as part of their work and we take great care to ensure that this information is kept safe and secure. Personal data includes things like names, addresses and age, information that we need in order to comply with our statutory role in educating pupils.

Most of this data is essential and does not require your consent to use it. Some personal data is not essential and for that, depending on age, we require the consent of either the pupil or parent. An example of the kind of data that needs consent would be using pupil photographs on the school website.

In this GDPR asset register you will find a complete list of all the systems the school uses which hold personal data. The report also contains additional information such as what personal data items are held, the legal basis for doing this, along with a description of the system and why the school processes the data.

If you have any queries about this document or any other issue relating to personal data, please contact the school Data Protection Officer, whose name is on the front of the pack.

System used: CPOMS

**Description**

CPOMS - Safeguarding and Child Protection Software for Schools Secure online monitoring of child protection, safeguarding and wider student pastoral welfare for schools. CPOMS is software application for monitoring child protection, safeguarding and a whole range of pastoral and welfare issues. Working alongside a school's existing safeguarding processes, CPOMS is an intuitive system to help with the management and recording of child protection, behavioural issues, bullying, special educational needs, domestic issues and much much more. Using CPOMS, schools can ensure that students are safe and fully supported, whilst school staff can focus on teaching and providing support, instead of administration.

**System used: Places Leisure- School Swimming Management System**

**Description**

The SSMS is a digital assessment tool, assessing pupils using Swim England School Swimming and Water Safety Charter. It is matched against the National Curriculum programmes of study and provides schools with termly reports. Reports evidence statistics to unlock Sports Premium funding for further swimming lessons. The product gives Places Leisure an important opportunity to gather national data to report on school swimming and influence national networks. Data gathered will strengthen potential to 'close the gap' for the 30% not yet meeting the standard. The system requires a school pupil data upload containing basic details for pupils swimming each term. Data is automatically uploaded to the Places Leisure School Swim App where school swim instructors assess pupils against Swim England's School Swimming Awards. Schools receive a termly update on pupil attainment for all pupils we have the data for.

System used: Evidence for Learning

<b>Description</b>	Evidence for Learning supports an Inquiry-based approach to education and provision, that allows ALL stakeholders in a child, young person or adult's learning and development to quickly and easily gather photo and video evidence, linked to the individual's learning goals as well as any key skills frameworks. Observations can be annotated and tagged to reflect your school's basket of indicators in an instant. Evidence for Learning supports ANY assessment framework and ANY assessment model – including evidencing and tracking progress against individual learning intentions and targets related to Education Health & Care (EHC) Plans. What's more, teachers can easily amend and add to these goals over time in order to respond to a learners' ongoing needs and development.

<b>Where is data stored?</b>	Data is stored on a physically separate machine to the websites. Access to the storage is closed to the outside internet – that is to say, the only way to get into the data machine is through a carefully closed and specific channel from the websites. The data storage machine is also behind a firewall that prevents any outside access except the system administrators with appropriate credentials. This access is via a secure VPN and open only to two trusted system engineers. The application server is protected from SQL Injection attacks by tight validation of any parameters sent by users to the application, so no access may be gained in this way. For instance, we do not permit write access on a routine that only needs to read data.
